What improvement/projects would you like to see at Heathcote or Garawarra field?

As mentioned in the April Members' Bulletin, your Committee needs your suggestions as to improvements or projects that could be made at either field or within the Club generally. In other words, things that will make Members' flying experiences even better.

Yes, there are serious limitations as to what we can do at Heathcote but that's no reason to not, at the very least, canvass for ideas. There are some limitations at Gara also (principally that of no fixed, permanent in-ground structures) but we do have much more control over our destiny at that field.

We still intend to elevate the vehicle approach at Gara to make unloading easier and await suitable fill to start that project. Also, we are planning solar panels, batteries, an inverter and a modest kitchen in the main container.

Here are some other ideas to "vote" on. Hopefully, you will have some more to add to the list.....

EXAMPLES (some of these are workable – others are not – but you get the idea!!)	Good idea	Lousy idea	Tell me more
Concrete/pave pit area			
Install retractable shade for pit area			
Build deck atop container			
Purchase bbq/trestle tables & umbrellas			
Weather "stations" with live feed to Club website			

Please complete the table, add your ideas & mail it off to the Club's PO Box.

Many thanks
Committee April 21, 2010
